Version 1.8

Updated the Windows configuration utility to version 1.8.0.0.

There are no changes to the windows drivers.

Version 1.7

Updated the Windows configuration utility to version 1.7.0.0.

There are no changes to the windows drivers.

Version 1.6

Updated the Windows 7 drivers to ensure that the mouse filter driver is installed only if the HID driver has been installed. This has improved compatibility when the CCS4 is used through extenders, and USB hubs. It has also resolved problems when the USB lead on the CCS4 is unplugged and connected to a different USB port.

Created Windows 8 driver installation files so Multi-Monitor Free-Flow can be supported on Windows 8 installations.

Version 1.5

Added a configuration page to the installer to allow the user to select the components to install.

Support for the CCS-XB added to the configurator.

A service added so the Driver can see the pre-logon monitor configuration.

Mumoupdate added. This application can be run from the start menu bar and will update the drivers with the screen configuration if the monitors are changed or the screen configuration lost.

Monitor changes are now only allowed if the user is in the current active desktop. This stops the single monitor configuration of the login desktop being reported when switching users.

Version 1.4

Initial release to production
